### Specific part

# 1 Technical description of the product

The frame anchor SPIT B-LONG is a plastic anchor consisting of a plastic sleeve made of polyamide and an accompanying specific screw of galvanised steel or of stainless steel.

The plastic sleeve is expanded by screwing in the specific screw which presses the sleeve against the wall of the drilled hole.

The Illustration and the description of the product are given in Annex A.

# Specification of the intended use in accordance with the applicable European Assessment Document

The performances given in Section 3 are only valid if the anchor is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor of 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer, but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

# 3 Performance of the product and references to the methods used for its assessment

#### 3.1 Mechanical resistance and stability (BWR 1)

Requirements with respect to the mechanical resistance and stability of non load bearing parts of the works are not included in this Basic requirement but are under the Basic Requirement safety in use.

#### 3.2 Safety In case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Anchorages satisfy requirements for Class A1
Resistance to fire	No performance determined (NPD)

# 3.3 Hyglene, health and the environment (BWR 3) Not relevant.

### 3.4 Safety In use (BWR 4)

Essential characteristic	Performance
Characteristic resistance for tension and shear loads	See Annex C 1 - C 6
Characteristic resistance for bending moments	See Annex C 1
Displacements under shear and tension loads	See Annex C 1, C 6
Edge distances and spacings	See Annex B 3, B 4

77261.14 8.06.04-825/13

#### European Technical Assessment ETA-13/1068

Page 4 of 18 | 28 February 2014

- Protection against noise (BWR 5)
   Not relevant.
- Energy economy and heat retention (BWR 6)
   Not relevant.
- 3.7 Sustainable use of natural resources (BWR 7)
  For the sustainable use of natural resources no performance was investigated for this product.
- 3.8 General aspects

The verification of durability is part of testing of the essential characteristics. Durability is only ensured if the specifications of intended use according to Annex B are kept.

4 Assessment and verification of constancy of performance (AVCP) system applied, with reference to its legal base

According to Decision of the Commission of 27 June 1997 (97/463/EC) (Official Journal of the European Communities L 198 of 25.07.1997, p. 31-32) the system of assessment and verification of constancy of performance (see Annex V and Article 65 Paragraph 2 to Regulation (EU) No 305/2011) given in the following table applies.

Product	Intended use(s)	Level or class	System
Plastic anchors for use in concrete and masonry	For use in systems, such as façade systems, for fixing or supporting elements which contribute to the stability of the systems		2+

5 Technical details necessary for the implementation of the AVCP system, as provided in the applicable European Assessment Document

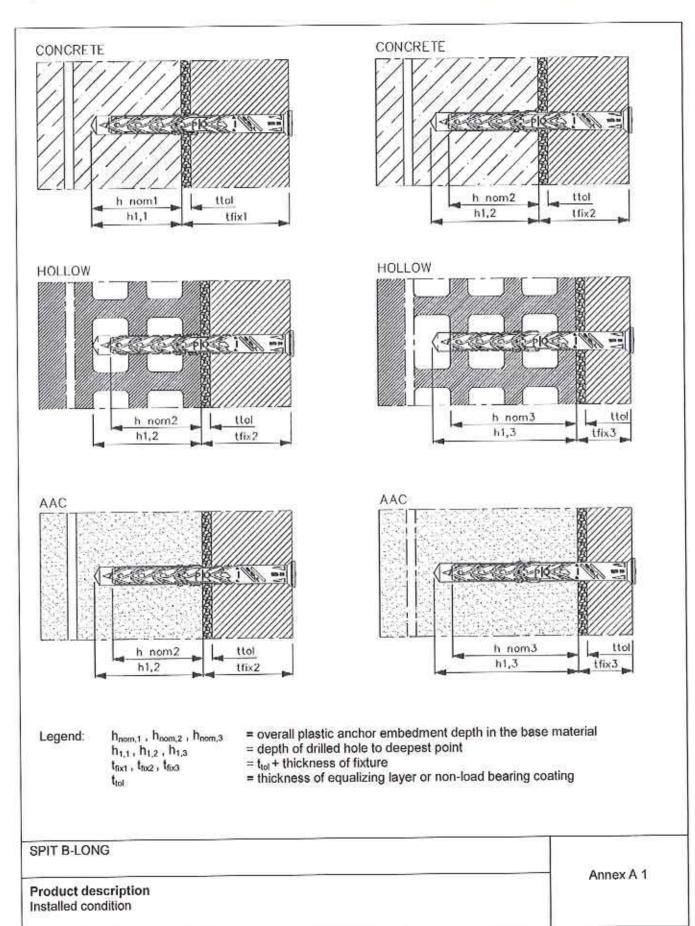

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited at Deutsches Institut für Bautechnik.

Issued in Berlin on 28 February 2014 by Deutsches Institut für Bautechnik

SPIT B-LONG	
Product description	Annex A 3
Dimensions and materials	

## Specifications of Intended use

#### Anchorages subject to:

- · Static and quasi-static loads
- Multiple fixing of non-structural applications

#### Base materials:

- Reinforced or unreinforced normal weight concrete with strength classes ≥ C12/15 (use category a), according to EN 206-1:2000.
- Solid brick masonry (use category b), according to Annex C 2.
   Note: The characteristic resistance is also valid for larger brick sizes and larger compressive strength of the masonry unit.
- Hollow brick masonry (use category c), according to Annex B 2, C 3, C 4 and C 5.
- · Autoclaved aerated concrete (use category d), according to Annex C 6.
- Mortar strength class of the masonry M2.5 at minimum according to EN 998-2:2010.
- For other base materials of the use categories a, b, c and d (only B-LONG Ø10) the characteristic resistance
  of the anchor may be determined by job site tests according to ETAG 020 Edition March 2012, Annex B.

#### Temperature Range:

- c: -40°C to +50°C (max. short term temperature +50°C and max. long term temperature +30°C)
- b: -40°C to +80°C (max. short term temperature +80°C and max. long term temperature +50°C)

#### Use conditions (Environmental conditions):

- Structures subject to dry internal conditions (zinc coated steel, stainless steel).
- Structures subject to external atmospheric exposure including industrial and marine environment (stainless steel).
- Structures subject to permanently damp internal condition, if no particular aggressive conditions exist (stainless steel).
  - Note: Particular aggressive conditions are e.g. permanent, alternating immersion in seawater or the splash zone of seawater, chloride atmosphere of indoor swimming pools or atmosphere with extreme chemical pollution (e.g. in desulphurization plants or road tunnels where de-icing materials are used).

## Design:

- The anchorages are designed in accordance with the ETAG 020 Edition March 2012, Annex C under the responsibility of an engineer experienced in anchorages and masonry work.
- Verifiable calculation notes and drawings shall be prepared taking account of the loads to be anchored, the nature and strength of the base materials and the dimensions of the anchorage members as well as of the relevant tolerances. The position of the anchor is indicated on the design drawings.
- Fasteners are only to be used for multiple fixings for non-structural application, according to ETAG 020 Edition March 2012.

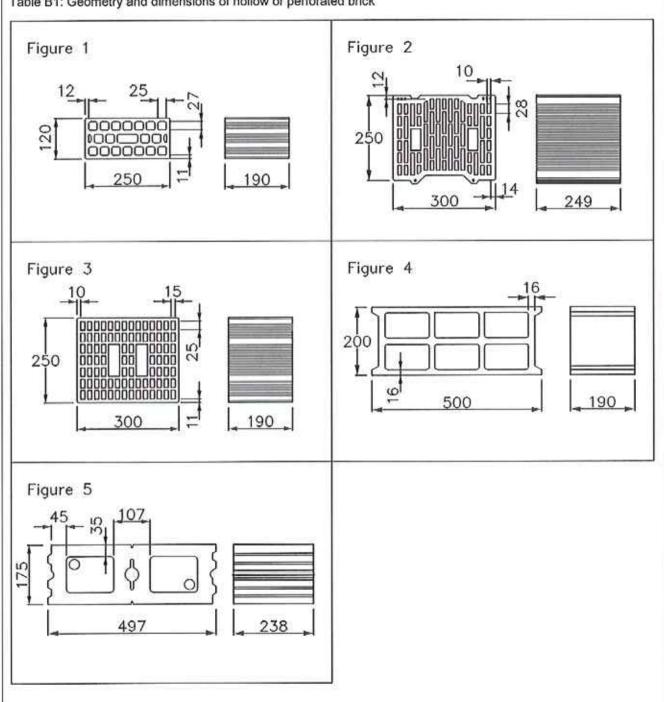

#### Installation:

- Hole drilling by the drill modes given in Annexes C1 to C8 for use categories b, c and d; the influence of other drilling methods may be determined by job side tests according to ETAG 020 Edition March 2012, Annex B.
- Anchor installation carried out by appropriately qualified personnel and under the supervision of the person responsible for technical matters of the site.
- Installation temperature from -5°C to +40°C.
- Exposure to UV due to solar radiation of the anchor not protected ≤ 6 weeks.
